

IFC 100 Technical Datasheet

Signal converter for electromagnetic flowmeters

- Simple and easy to install and start-up
- Diagnostics of device and application
- Extremely fast signal conversion

The documentation is only complete when used in combination with the relevant documentation for the sensor.

1.1 The more than economical solution

The **IFC 100** electromagnetic signal converter is designed to measure the flow velocity, conductivity, volume and mass flow of electrically conductive, liquid media.

The signal converter can be combined with any measuring sensor, making it very widely used. In terms of available housing versions, there is a compact variant, in which the signal converter is connected to the measuring sensor, as well as a 0° and 45° version. If the measuring point is difficult to access or the ambient conditions prevent the use of the compact variant, the signal converter is available in a wall-mounted housing.

The **IFC 100** was designed for applications requiring an economical measuring solution with a high level of technology.

(signal converter in wall-mounted housing)

- ① Large backlit graphic display with 4 push buttons to operate the signal converter without having to open the housing
- ② Supply voltage: 100...230 VAC (standard) and 24 VDC or 24 VAC/DC (optional)

Highlights

- Simple installation and start-up
- Available inputs and outputs: Current output (incl. HART®), pulse/frequency output, status output and control input
- Large backlit graphic display with intuitive operation
- A variety of operating languages integrated as standard
- Maintenance free
- Excellent price/performance ratio
- Extremely quick signal conversion

Industries

- Water & Wastewater
- Agriculture
- Heating, Ventilation & Air Conditioning (HVAC)
- Machinery
- Power plants

Applications

- Measuring homogeneous media
- Water distribution networks and spray-irrigation systems
- Water treatment
- Environmental technology

1.2 Options and variants

Modular converter concept

(Compact version as 45° version)

Despite its somewhat different appearance, the IFC 100 has many of the same functions as its "big brother" IFC 300. Diagnostic function, conductivity measurement and simple navigation to name but a few

This latest member of the converter family also has a large number of fully-developed functions:

- various power supply versions (AC, DC, AC/DC)
- HART[®] as standard
- optional Ex version available

Compact design in various versions

(Compact version as 0° version)

The IFC 100 C in the 0° version is ideal for installation in vertical pipelines.

On the other hand, the 45° version improves the readability of the display in specific applications.

The backlit display provides excellent readability from long distances. The 4 push buttons make operation, start-up and configuration simple.

In the 0° version, the signal converter can be rotated in 90° increments allowing for customer-specific installation position. The 45° version can only be rotated in 180° increments.

Remote version in wall-mounted housing

For temperature effects, vibration or in places that are difficult to access, remote installation is possible with the IFC 100~W.

A signal cable is used to connect the measuring sensor and the converter for the purposes of power supply and signal processing.

The electronics can be used in all housing versions without having to be reconfigurated.

(signal converter in wall-mounted housing)

Diagnostics

The IFC 100 has been equipped with a wide variety of diagnostic tools for device function and application check.

- Conductivity measurement
- Electrode error
- Process or ambient temperature too high

1.3 Signal converter / measuring sensor combination possibilities

| Measuring sensor | Measuring sensor + measuring converter IFC 100 | |
|------------------|--|-----------------------------|
| | Compact (0°/45° version) | Remote wall-mounted housing |
| OPTIFLUX 1000 | OPTIFLUX 1100 C | OPTIFLUX 1100 W |
| OPTIFLUX 2000 | OPTIFLUX 2100 C | OPTIFLUX 2100 W |
| OPTIFLUX 4000 | OPTIFLUX 4100 C | OPTIFLUX 4100 W |
| OPTIFLUX 5000 | OPTIFLUX 5100 C | OPTIFLUX 5100 W |
| OPTIFLUX 6000 | OPTIFLUX 6100 C | OPTIFLUX 6100 W |
| WATERFLUX 3000 | WATERFLUX 3100 C | WATERFLUX 3100 W |

1.4 Measuring principle

An electrically conductive fluid flows inside an electrically insulating pipe through a magnetic field. This magnetic field is generated by a current, flowing through a pair of field coils. Inside of the fluid, a voltage U is generated:

U = v * k * B * D

in which:

v = mean flow velocity

k = factor correcting for geometry

B = magnetic field strength

D = inner diameter of flow meter

The signal voltage U is picked off by electrodes and is proportional to the mean flow velocity v and thus the flow rate q. A signal converter is used to amplify the signal voltage, filter it and convert it into signals for totalising, recording and output processing.

- ① Induced voltage (proportional to flow velocity)
- ② Electrodes
- 3 Magnetic field
- 4 Field coils

2.1 Technical data

- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local representative.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Download Center).

Measuring system

| Measuring principle | Faraday's law of induction |
|---------------------|---|
| Application range | Continuous measurement of current volume flow, flow velocity, conductivity, mass flow (at constant density), coil temperature of the measuring sensor |

Design

| The measuring system consists of a measuring sensor and a signal converter. |
|---|
| |
| DN10150 / 3/86" |
| DN251200 / 148" |
| DN2.51200 / 1/1048" |
| Flange: DN15300 / ½12" Sandwich: DN2.5100 / 1/104" |
| DN2.5150 / 1/106" |
| DN25600 / 124" |
| With the exception of the OPTIFLUX 1000 and WATERFLUX 3000 all measuring sensors are also available in an Ex-version. |
| |
| IFC 100 C (0° & 45° version) |
| IFC 100 W |
| All signal converters are also available in Ex-versions. |
| |
| Current- (incl. HART®), pulse, frequency, status output and/or limit switch |
| 2 internal counters with a max. of 8 counter places (e.g. for counting volume and/or mass units) |
| Integrated verification, diagnostic functions: measuring device, empty pipe detection, stabilization |
| |

| Display and user interface | |
|----------------------------|---|
| Graphic display | LC display, backlit white. |
| | Size: 128 x 64 pixels, corresponds to 59 x 31 mm = 2.32" x 1.22" |
| | Ambient temperatures below -25°C / -13°F, may affect the readability of the display. |
| Operating elements | 4 push buttons for operator control of the signal converter without opening the housing. |
| Remote control | PACTware® (incl. Device Type Manager (DTM)) (in preparation) |
| | HART® Hand Held Communicator from Emerson Process (in preparation) |
| | AMS® from Emerson Process (in preparation) |
| | PDM [®] from Siemens (in preparation) |
| | All DTMs and drivers are available free of charge from the manufacturer's website. |
| Display functions | |
| Operating menu | Setting the parameters using 2 measured value pages, 1 status page, 1 graphics page (measured values and graphics are freely adjustable) |
| Language display texts | English, French, German, Dutch, Polish, Portuguese, Danish, Spanish, Swedish, Slovenian, Italian (others on request) |
| Units | Metric, British and US units selectable as required from lists for volume / mass flow and counting, flow velocity, electrical conductivity, temperature |

Measuring accuracy

| Reference conditions | Medium: water | |
|-------------------------|--|--|
| | Temperature: 20°C / 68°F | |
| | Pressure: 1 bar / 14.5 psi | |
| | Inlet section: ≥ 5 DN | |
| Maximum measuring error | ±0.3% of the measured value ±1 mm/s, depending on the measuring sensor | |
| | For detailed information and accuracy curves, refer to chapter "Accuracy". | |
| Repeatability | ±0.1% | |

Operating conditions

| Temperature | |
|---|--|
| Process temperature | Refer to technical data for the measuring sensor. |
| Ambient temperature | Depends on the version and combination of outputs. |
| | It is a good idea to protect the converter from external heat sources such as direct sunlight as higher temperatures reduce the life cycle of all electronic components. |
| | Ambient temperatures below -25°C / -13°F, may affect the readability of the display. |
| Storage temperature | -40+70°C / -40+158°F |
| Pressure | |
| Medium | Refer to technical data for the measuring sensor. |
| Ambient pressure | Atmospheric |
| Chemical properties | |
| Electrical conductivity | All media except for water: $\geq 5~\mu S/cm$ (also refer to the technical data for the measuring sensor) |
| | Water: ≥ 20 µS/cm |
| Physical condition | Conductive, liquid media |
| Solid content (volume) | ≤ 10% for OPTIFLUX measuring sensors |
| Gas content (volume) | \leq 3% for OPTIFLUX measuring sensors |
| Flow rate | For detailed information, refer to chapter "Flow tables". |
| Other conditions | |
| Protection category acc. to IEC 529 / EN 60529 | IP66/67 (acc. to NEMA 4/4X) |

Installation condtitions

| Installation | For detailed information, refer to chapter "Installation conditions". |
|------------------------|---|
| Inlet/outlet runs | Refer to technical data for the measuring sensor. |
| Dimensions and weights | For detailed information refer to chapter "Dimensions and weights". |

Materials

| Signal converter housing | Die-cast aluminium (polyurethane coated) |
|--------------------------|--|
| Measuring sensor | For housing materials, process connections, liners, grounding electrodes and gaskets, see the technical data for the measuring sensor. |

Electrical connection

| General | Electrical connection is carried out in conformity with the VDE 0100 directive "Regulations for electrical power installations with line voltages up to 1000 V" or equivalent national regulations. |
|-------------------|---|
| Power supply | 100230 VAC (-15% / +10%), 50/60 Hz; non-Ex: standard; Ex: optional 240 VAC + 5% is included in the tolerance range. |
| | 1224 VDC (-55% / +30%); only available in non Ex version 12 VDC - 10% is included in the tolerance range. |
| | 24 VAC/DC (AC: -15% / +10%; DC: -25% / +30%); only available as Ex version 12 V is not included in the tolerance range. |
| Power consumption | AC: 7 VA |
| | DC: 4 W |
| Signal cable | Only necessary for remote device versions. |
| | DS 300 (type A) Max. length: 600 m / 1950 ft (depending on electrical conductivity and version of measuring sensor) |
| Cable entries | Standard: M20 x 1.5 (812 mm) |
| | Option: ½" NPT, PF ½ |

Outputs

| • | |
|-----------------------------------|---|
| General | All outputs are electrically isolated from each other and from all other circuits. |
| | All operating data and output values can be adjusted. |
| Description of used abbreviations | U _{ext} = external voltage; R _L = load + resistance; U _o = terminal voltage; I _{nom} = nominal current |
| Current output | |
| Output data | Volume flow, mass flow, diagnostics value, flow velocity, coil temperature, conductivity |
| Settings | Without HART® |
| | Q = 0%: 020 mA; Q = 100%: 1021.5 mA |
| | Error identification: 022 mA |
| | With HART® |
| | Q = 0%: 420 mA; Q = 100%: 1021.5 mA |
| | Error identification: 3.522 mA |
| Operating data | |
| Active | U _{int, nom} = 20 VDC |
| | I ≤ 22 mA |
| | $R_{L} \le 750 \Omega$ |
| Passive | $U_{\text{ext}} \le 32 \text{ VDC}$ |
| | I ≤ 22 mA |
| | $U_0 \le 2 \text{ V at I} = 22 \text{ mA}$ |
| | $R_L \leq (U_{ext} - U_0) / I_{max}$ |

| HART [®] | |
|---|---|
| Description | HART® protocol via active and passive current output |
| | HART® version: V5 |
| | Universal HART® parameter: completely integrated |
| Load | $\geq 250~\Omega$ at HART $^{@}$ test point; Note maximum load for current output! |
| Multi-Drop operation | Yes, current output = 4 mA |
| | Multi-Drop address adjustable in operation menu 115 |
| Device driver | Available for FC 375/475, AMS, PDM, FDT/DTM |
| Registration (HART Communication Foundation) | Yes |
| Pulse or frequency output | |
| Output data | Pulse output: volume flow, mass flow |
| | Frequency output: volume flow, mass flow, diagnostic value, flow velocity, coil temperature, conductivity |
| Function | Adjustable as pulse or frequency output |
| Pulse rate/frequency | 0.0110000 pulses/s or Hz |
| Settings | Pulses per volume or mass unit or max. frequency for 100% flow |
| | Pulse width: setting automatic, symmetric or fixed (0.052000 ms) |
| Operating data | |
| Passive | $U_{\text{ext}} \le 32 \text{ VDC}$ |
| | f_{max} in operating menu set to $f_{\text{max}} \leq 100 \text{ Hz}$: |
| | I ≤ 100 mA |
| | open: $I \le 0.05$ mA at $U_{ext} = 32$ VDC |
| | closed: $U_{0, max} = 0.2 \text{ V}$ at $I \le 10 \text{ mA}$ $U_{0, max} = 2 \text{ V}$ at $I \le 100 \text{ mA}$ |
| | f_{max} in operating menu set to 100 Hz < $f_{max} \le 10$ kHz: |
| | I ≤ 20 mA |
| | open: $I \le 0.05$ mA at $U_{ext} = 32$ VDC |
| | closed: $ \begin{array}{l} \text{Closed:} \\ \text{U}_{0,\;\text{max}} = 1.5\;\text{V at I} \leq 1\;\text{mA} \\ \text{U}_{0,\;\text{max}} = 2.5\;\text{V at I} \leq 10\;\text{mA} \\ \text{U}_{0,\;\text{max}} = 5.0\;\text{V at I} \leq 20\;\text{mA} \end{array} $ |
| Low flow cut-off | |
| Function | Switching point and hysteresis separately adjustable for each output, counter and the display |
| Switching point | Set in increments of 0.1. |
| | 020% (current output, frequency output) or 0±9.999 m/s (pulse output) |
| Hysteresis | Set in increments of 0.1. |
| | 05% (current output, frequency output) or 05 m/s (pulse output) |

| Time constant | | | | | | |
|------------------------------|---|--|--|--|--|--|
| Function | The time constant corresponds to the elapsed time until 67% of the end value has been reached according to a step function. | | | | | |
| Settings | Set in increments of 0.1. | | | | | |
| | 0100 s | | | | | |
| Status output / limit switch | | | | | | |
| Function and settings | Adjustable as automatic measuring range conversion, display of flow direction, counter overflow, error, switching point or empty pipe detection | | | | | |
| | Valve control with activated dosing function | | | | | |
| | Status and/or control: ON or OFF | | | | | |
| Operating data | | | | | | |
| Passive | $U_{ext} \le 32 \text{ VDC}$ | | | | | |
| | I ≤ 100 mA | | | | | |
| | open: $I \le 0.05$ mA at $U_{ext} = 32$ VDC | | | | | |
| | closed: $U_{0, \text{ max}} = 0.2 \text{ V}$ at $I \le 10 \text{ mA}$ $U_{0, \text{ max}} = 2 \text{ V}$ at $I \le 100 \text{ mA}$ | | | | | |
| Modbus (in preparation) | | | | | | |
| Description | Modbus RTU, Master / Slave, RS485 | | | | | |
| Address range | 1247 | | | | | |
| Broadcast | Supported with function code 16 | | | | | |
| Supported Baudrate | 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200 Baud | | | | | |

Approvals and certificates

| CE | The device fulfils the statutory requirements of the EC directives. The manufacturer certifies that these requirements have been met by applying the CE marking. | | | | | |

2.4 Measuring accuracy

Reference conditions

• Medium: water

Temperature: 20°C / 68°F
Pressure: 1 bar / 14.5 psi
Inlet section: ≥ 5 DN

X [m/s]: flow velocity

Y [%]: deviation from the actual measured value (mv)

| | DN [mm] | DN [inches] | Accuracy | Curve |
|------------------------------------|---------|-------------|---------------------|-------------|
| OPTIFLUX 2100 / 4100 / 5100 / 6100 | 101200 | 3/848 | 0.3% of mv + 1 mm/s | 1 |
| OPTIFLUX 1100 | 10150 | 3/86 | 0.4% of mv + 1 mm/s | as ① + 0.1% |
| OPTIFLUX 4100 / 5100 / 6100 | 2.56 | 1/101/4 | | |
| WATERFLUX 3100 | 25600 | 124 | 0.3% of mv + 1 mm/s | 1 |

3.1 Intended use

The electromagnetic flowmeters are designed exclusively to measure the flow and conductivity of electrically conductive, liquid media.

For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.

If the device is not used according to the operating conditions (refer to chapter "Technical data), the intended protection could be affected.

3.2 Installation specifications

The following precautions must be taken to ensure reliable installation.

- Make sure that there is adequate space to the sides.
- Protect the signal converter from direct sunlight and install a sun shade if necessary.
- Signal converters installed in control cabinets require adequate cooling, e.g. by fan or heat exchanger.
- Do not expose the signal converter to intense vibration. The flowmeters are tested for a vibration level in accordance with IEC 68-2-3.

3.3 Mounting of the compact version

The signal converter is mounted directly on the measuring sensor. For installation of the flowmeter, please observe the instructions in the supplied product documentation for the measuring sensor.

3.4 Mounting the wall-mounted housing, remote version

Assembly materials and tools are not part of the delivery. Use the assembly materials and tools in compliance with the applicable occupational health and safety directives.

3.4.1 Wall mounting

Figure 3-1: Mounting the wall-mounted housing

- ① Prepare the holes with the aid of the mounting plate. For further information refer to *Mounting plate, wall-mounted version* on page 17.
- 2 Fasten the device securely to the wall with the mounting plate.

Mounting multiple devices next to each other

| | [mm] | [inches] |
|---|------|----------|
| а | Ø6.5 | Ø0.26 |
| b | 87.2 | 3.4 |
| С | 241 | 9.5 |
| d | 310 | 12.2 |
| е | 257 | 10.1 |

4.1 Important notes on electrical connection

Electrical connection is carried out in conformity with the VDE 0100 directive "Regulations for electrical power installations with line voltages up to 1000 V" or equivalent national regulations.

- Use suitable cable entries for the various electrical cables.
- The sensor and converter are configured together in the factory. For this reason, please connect the devices in pairs. Ensure that the sensor constant GK/GKL (see type plates) are identically set.
- If delivered separately or when installing devices that were not configured together, set the converter to the DN size and GK/GKL of the sensor.

4.2 Preparing the signal and field current cables

Assembly materials and tools are not part of the delivery. Use the assembly materials and tools in compliance with the applicable occupational health and safety directives.

4.2.1 Signal cable A (type DS 300), construction

- Signal cable A is a double-shielded cable for signal transmission between the measuring sensor and signal converter.
- Bending radius: ≥ 50 mm / 2"

Figure 4-1: Construction of signal cable A

- ① Stranded drain wire (1) for the inner shield (10), 1.0 mm² Cu / AWG 17 (not insulated, bare)
- 2 Insulated wire (2), 0.5 mm² Cu / AWG 20
- 3 Insulated wire (3), 0.5 mm² Cu / AWG 20
- 4 Outer sheath
- (5) Insulation layers
- 6 Stranded drain wire (6) for the outer shield (60)

4.2.2 Length of signal cable A

For temperatures of the medium above 150°C/300°F, a special signal cable and a ZD intermediate socket are necessary. These are available including the changed electrical connection diagrams.

| Measuring sensor | Nominal size | | Min. electrical | Curve for signal | |
|------------------|--------------|----------|-------------------------|------------------|--|
| | DN [mm] | [inches] | conductivity [µS/cm] | cable A | |
| OPTIFLUX 1000 F | 10150 | 3/86 | 5 | A1 | |
| OPTIFLUX 2000 F | 25150 | 16 | 20 | A1 | |
| | 2001200 | 848 | 20 | A2 | |
| OPTIFLUX 4000 F | 2.5150 | 1/106 | 1 | A1 | |
| | 2001200 | 848 | 1 | A2 | |
| OPTIFLUX 5000 F | 2.5100 | 1/104 | 1 | A1 | |
| | 150250 | 610 | 1 | A2 | |
| OPTIFLUX 6000 F | 2.5150 | 1/106 | 1 | A1 | |
| WATERFLUX 3000 F | 25600 | 124 | 20 | A1 | |

Figure 4-2: Maximum length of signal cable A

- ① Maximum length of signal cable A between the measuring sensor and signal converter [m]
- 2 Maximum length of signal cable A between the measuring sensor and signal converter [ft]
- 3 Electrical conductivity of the medium being measured [μ S/cm]

4.2.3 Connection diagram for signal and field current cable

The device must be grounded in accordance with regulations in order to protect personnel against electric shocks.

- A shielded two-wire copper cable is used as the field current cable. The shielding **MUST** be connected in the housing of the measuring sensor and signal converter.
- The outer shield (60) is connected in the terminal compartment of the measuring sensor directly via the shield and a clip.
- Bending radius of signal and field current cable: \geq 50 mm / 2"
- The following illustration is schematic. The positions of the electrical connection terminals may vary depending on the housing version.

Figure 4-3: Connection diagram for signal and field current cable

- 1 Electrical terminal compartment in signal converter
- ② Signal cable A
- 3 Field current cable C
- 4 Electrical terminal compartment in measuring sensor
- ⑤ Functional ground FE

4.3 Connecting the power

The device must be grounded in accordance with regulations in order to protect personnel against electric shocks.

- The housings of the devices, which are designed to protect the electronic equipment from dust and moisture, should be kept well closed at all times. Creepage distances and clearances are dimensioned to VDE 0110 and IEC 664 for pollution severity 2. Supply circuits are designed for overvoltage category III and the output circuits for overvoltage category II.
- Fuse protection (I_N ≤ 16 A) for the infeed power circuit, and also a disconnecting device (switch, circuit breaker) to isolate the signal converter must be provided.

Figure 4-4: Terminal compartment for power

- Retaining band of the cover
- ② Cable entry power supply remote version
- 3 Cable entry power supply compact version

Version overview

| Version | Non-Ex | Ex |
|------------|----------|----------|
| 100230 VAC | Standard | Optional |
| 1224 VDC | Standard | - |
| 24 VAC/DC | - | Standard |

• Open the cover of the electrical terminal compartment by pressing down and pulling forwards at the same time.

Figure 4-5: Power supply connection

- 100...230 VAC (-15% / +10%), 8 VA
- ② 24 VDC (-55% / +30%), 4 W
- 3 24 VAC/DC (AC: -15% / +10%; DC: -25% / +30%), 7 VA and 4 W
- Close the cover after the power has been connected.

100...230 VAC (tolerance range: -15% / +10%)

• Note the power supply voltage and frequency (50...60 Hz) on the nameplate.

240 VAC + 5% is included in the tolerance range.

12...24 VDC (tolerance range: -55% / +30%)

- Note the data on the nameplate!
- When connecting to functional extra-low voltages, provide a facility for protective separation (PELV) (acc. to VDE 0100 / VDE 0106 and IEC 364 / IEC 536 or relevant national regulations).

12 VDC - 10% is included in the tolerance range.

24 VAC/DC (tolerance range: AC: -15% / +10%; DC: -25% / +30%)

- AC: Note the power supply voltage and frequency (50...60 Hz) on the nameplate.
- DC: When connecting to functional extra-low voltages, provide a facility for protective separation (PELV) (acc. to VDE 0100 / VDE 0106 and IEC 364 / IEC 536 or relevant national regulations).

12 V is **not** included in the tolerance range.

4.4 Overview of outputs

4.4.1 Description of the CG number

Figure 4-6: Marking (CG number) of the electronics module and output variants

- ① ID number: 0
- ② ID number: 0 = standard; 9 = special
- 3 Power supply
- Display (language versions)
- ⑤ Output version

4.4.2 Fixed, non-alterable output versions

This signal converter is available with various output combinations.

- The grey boxes in the tables denote unassigned or unused connection terminals.
- In the table, only the final digits of the CG-No. are depicted.
- Connection terminal A+ is only operable in the basic output version.

| CG-No. | Connection terminals | | | | | | |
|--------|----------------------|---|----|---|----|---|----|
| | A+ | Α | A- | С | C- | D | D- |

Basic outputs (I/O) Standard

| | • | | | | |
|-----|----------------------------|--|--|------------------------|---|
| 100 | | I _p + HART [®] passive ① | | S _p passive | P _p / S _p passive ② |
| | I _a + HART® act | ive ① | | | |

- 1 function changed by reconnecting
- 2 changeable

Description of used abbreviations

| la | I _a I _p Current output active or passive | |
|----|--|--------------------------------------|
| Pp | | Pulse/frequency output passive |
| Sp | | Status output / limit switch passive |

4.5 Laying electrical cables correctly

Figure 4-7: Protect housing from dust and water

- ① For compact versions with nearly horizontally-oriented cable entries, lay the necessary electric cables with a drip loop as shown in the illustration.
- 2 Tighten the screw connection of the cable entry securely.
- 3 Seal cable entries that are not needed with a plug.

KROHNE product overview

- Electromagnetic flowmeters
- Variable area flowmeters
- Ultrasonic flowmeters
- Mass flowmeters
- Vortex flowmeters
- Flow controllers
- Level meters
- Temperature meters
- Pressure meters
- Analysis products
- Measuring systems for the oil and gas industry
- Measuring systems for sea-going tankers
